Manpower Requisition and Recruitment Management System

---

1. Project Overview

This document outlines the business requirements for a comprehensive recruitment management system to streamline the manpower requisition process, starting from a hiring request to final onboarding. The system will track every stage of the recruitment lifecycle, maintain a centralized candidate repository, automate interview scheduling, and provide analytics dashboards.

---

2. Objectives

- Enable HR to receive, process, and fulfil manpower requisition requests.
- Create a searchable repository of candidate profiles with historical metadata.
- Define and manage multi-level interview hierarchies per requirement.
- Automate interview scheduling and calendar invites.
- Track end-to-end candidate progress from sourcing to offer release and joining.
- Maintain dashboards for HR performance tracking, TATs, and budget analysis.

---

3. Stakeholders

Role	Description
HR Team	Responsible for processing requirements and sourcing candidates
Hiring Manager	Sends manpower requests, defines interview hierarchy
Interview Panel	Conducts interviews at various levels
Candidate	Job applicant processed through the system

---

4. Functional Requirements

4.1 Manpower Requisition Submission

- User (Hiring Manager) sends a request to HR via email.
- HR checks for the following details:
    - Number of positions
    - Detailed Job Description (JD)
    - Location
    - Experience range

    - Replacement / New hiring
    - Interview hierarchy (L1 to L5 (can vary) names and emails)
    - Budget
- If information is complete, HR assigns the request internally (e.g., Mansi assigns to Deepa).

4.2 Candidate Sourcing & Repository Management

- HR (e.g., Deepa) sources profiles from Naukri, LinkedIn, vendors, etc.
- Upload candidate profiles (bulk or single) to a repository.
- Each profile includes:
    - Name, Experience, Skills, Source, Resume, Date added, etc (based on the paper form we provide to candidates).
- System retains original metadata for historical filtering.
    - The experience value stored at the time of upload will be used along with the current date to calculate total experience dynamically.
    - **Example:** If a candidate had **4 years of experience** when their profile was uploaded in **2023**, and you're checking the repository in **2025**, their calculated experience becomes **6 years**. So, if you apply a filter for candidates with **more than 5 years of experience**, this profile **will be visible** in the search results.
    - This ensures the system can **evolve candidate data over time** without needing manual updates.

4.3 Screening & Shortlisting

- Deepa screens candidates and marks relevant ones.
- Shortlisted candidates (e.g., 40 out of 50) are passed to Level 1 for technical interviews.
- Candidate info is visible to Level 1 with a form filled by HR (resume, JD, source, etc.).

4.4 Interview Process & Hierarchy Workflow

- Each level (L1 to L5) can:
    - View candidate details
    - See comments from previous levels.
    - Approve/Reject with comments.
- Approved candidates are passed to the next level.
- Each level gets visibility only after the previous level approves.

4.5 Interview Scheduling & Calendar Integration

- HR defines interview date via a form.
- System sends automatic calendar invites to panel members (starting with Level 1).
- After L1 approval, HR schedules L2 interview via same form and new invite is sent.

4.6 Final Selection & Offer Management

- Once a candidate clears all interview levels:
    - System notifies HR of clearance.
    - HR uploads the offer letter (in the app) and clicks a button in the app to indicate that the offer letter has been sent to the candidate.
    - HR also inputs expected joining date.
    - Both candidate and HR receive email 1 week before joining.
    - Actual joining date to be recorded (may differ from expected).

4.7 Dashboard & Reporting

- Dashboard should include:
    - Total open positions by HR
    - Number of positions closed
    - Requirement release date vs Offer sent date (TAT 1)
    - Requirement release date vs Actual joining date (TAT 2)
    - Filters: Department, HR SPOC, Customer
    - Budgeted vs Closed Salary
    - Charts/graphs for visual tracking
